

# DLP Suite for Higher Education

## Protect Faculty, Staff, and Student Privacy. Stop Data Breaches.

University systems and individual colleges must comply with state and federal regulations like FERPA to protect employee and student information like SSNs, PCI, health, and other Personally Identifiable Information (PII). Identity Finder is the higher education industry standard for protecting PII, mitigating data leakage, and preventing breaches. Identity Finder DLP for Higher Education discovers and secures PII quickly, effectively, and affordably.

### How Information Leakage Occurs

Even if you have a core system protected by a small army of security professionals, sensitive PII data can end up in places it shouldn't be. Consider these common examples:

- **File Servers:** An employee saves a spreadsheet to a shared network folder without realizing it contains Social Security Numbers.
- **Laptops:** A professor loses a laptop with old files they didn't realize contains student SSNs and grades.
- **E-mail Servers:** A staff member has messages with Credit Card Numbers in his inbox and sent items.
- **Visitors' Computers:** Unprotected wireless routers connected to your internal network can expose SSNs to visitors and hackers.
- **Databases:** An employee in the Registrar's office uses student Dates of Birth to test a new database application.
- **USB and Flash Drives:** Your employee backs up his documents to a USB drive to take home not realizing it contains student PII.

### How Identity Finder DLP Helps You Comply

Identity Finder DLP for Higher Education helps schools search and secure data-at-rest and discover unprotected sensitive student data. The AnyFind™ technology simplifies this process by automatically identifying true Social Security Number and Credit Card data and minimizing false positives.

Beyond identification, end users and administrators have the ability to shred, redact, encrypt, and quarantine data within your university network.

#### → Search Data-at-Rest

- Windows/Mac Desktops/Servers
- All File Types and Images
- NAS, Linux, and UNIX Devices
- SQL, Oracle, and Databases
- E-Mail Applications and Servers
- Websites and SharePoint

#### → Discover

- Social Security Numbers
- Credit Cards and PCI Data
- Dates of Birth and Addresses
- Driver Licenses and University IDs
- Custom Patterns and other PII

#### → Protect and Comply

- Comply with FERPA, PCI-DSS
- Shred, Redact, and Encrypt
- Quarantine

#### → Report

- Centralized Reporting
- Technical Level Reports
- Trending Analysis

## DLP Endpoint for Windows and Mac | DLP Console

Identity Finder DLP Endpoint helps organizations prevent data loss by finding and protecting PII data. The AnyFind™ engine automatically discovers sensitive information stored on desktops, servers, remote computers, databases, websites, and removable drives. The DLP Console provides centralized management and reporting.

### Requirements:

**DLP Endpoint:** Windows (x86 or x64) version 7, Vista, XP, Server 2003 or higher; Mac OS X (Intel) 10.5 or higher.

**DLP Console:** Windows Server 2008 or higher with IIS. SQL Server 2008 or higher.

The DLP Endpoint interface is easy to use by administrators and end users. Find and protect sensitive information across your university network.

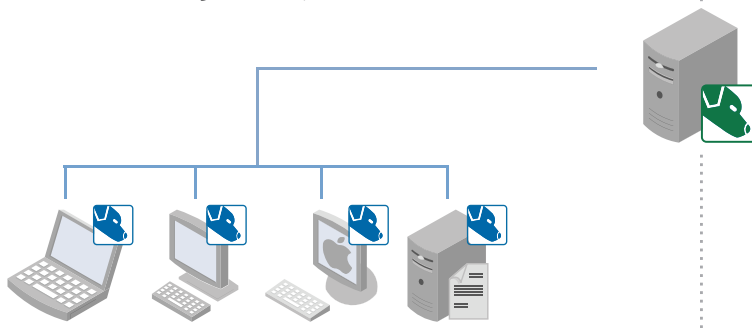

The DLP Endpoint's remediation features allow end users to Shred, Redact, Encrypt, and Quarantine unprotected data.

The DLP Console's dashboard provides access to executive level and technical reports.
