Protecting Privacy and Supporting Your Core Mission

Identity Finder DLP Suite for Government makes it simple and affordable to securely fulfill your core mission while protecting the public's privacy. Whether your agency defends the homeland, administers licenses, or provides social services, your employees can accidentally leak your citizens' Nonpublic Personal Information (NPI) or Personally Identifiable Information (PII). Identity Finder discovers and secures NPI/PII quickly, affordably, and easily so you can focus on your core mission.

How Information Leakage Occurs

Even if you have a core system protected by a small army of security professionals, sensitive NPI/PII can end up in places it shouldn't be. Consider these common examples:

- **File Servers:** An employee saves a spreadsheet to a shared network folder without realizing it contains Social Security Numbers.
- **Laptops:** A staff member loses a laptop with old files they didn't realize contain beneficiary contact information.
- **E-mail Servers:** An employee has messages with Driver License data in her inbox and sent items from years ago.
- **Visitors' Computers:** Unprotected wireless routers connected to your internal network can expose confidential information to visitors and hackers.
- **Databases:** A contractor uses real dates of birth to test a new database application.
- **USB and Flash Drives:** Your employee backs up his documents to a usb drive to take home not realizing it contains citizens' PII.

How Identity Finder DLP for Government Helps You

Identity Finder DLP helps agencies search and secure data-at-rest and discover unprotected NPI. The AnyFind™ technology simplifies this process by automatically identifying true Social Security Numbers and confidential data, while minimizing false positives.

Beyond identification, end users and administrators have the ability to shred, redact, encrypt, and quarantine data within your entire agency network.

→ Search Data-at-Rest

- Windows/Mac Desktops/Servers
- NAS, Linux, and UNIX Devices
- SQL, Oracle, and Databases
- E-Mail Applications and Servers
- Websites and SharePoint

→ Discover NPI/PII

- Social Security Numbers
- Drivers Licenses
- Dates of Birth and Addresses
- Credit Cards and Bank Accounts
- Custom Patterns and other NPI

→ Protect and Secure

- Comply with Regulations
- Shred, Redact, and Encrypt
- Quarantine

→ Report

- Centralized Reporting
- Technical Level Reports
- Trending Analysis

DLP Endpoint for Windows and Mac | DLP Console

Identity Finder DLP Endpoint helps agencies prevent data loss by finding and protecting NPI. The AnyFind™ engine automatically discovers sensitive information stored on desktops, servers, remote computers, databases, websites, and removable drives. The DLP Console provides centralized management and reporting.

Requirements:

DLP Endpoint: Windows (x86 or x64) version 7, Vista, XP, Server 2003 or higher; Mac OS X (Intel) 10.5 or higher.

DLP Console: Windows Server 2008 or higher with IIS. SQL Server 2008 or higher.

The DLP Endpoint interface is easy to use by administrators and end users. Find and protect sensitive information across your agency's environment.

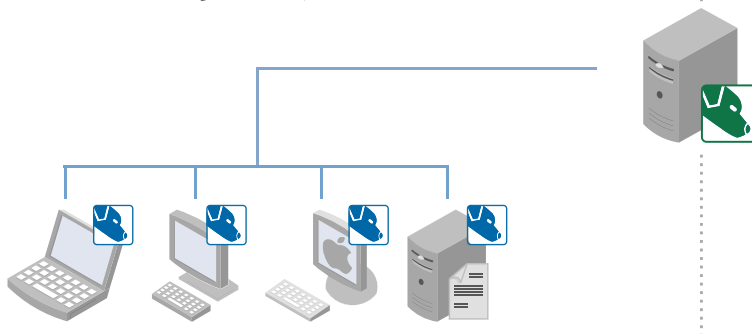

The DLP Endpoint's remediation features allow end users to Shred, Redact, Encrypt, and Quarantine unprotected data.

The DLP Console's dashboard provides access to executive level and technical reports.
