Thieves are trying to find your PII... are you?

Most data breaches occur because of insecure data sitting on corporate machines - data people are unaware even exists. Identity Finder reduces the risk of data leakage by finding sensitive data wherever it resides and giving you the tools to protect it. Fix the problem at the source. Sounds simple, doesn't it? Now it is!

Search

- Social Security Numbers
- Credit and Debit Card Information
- Bank Account Information
- Patient Health Information
- Passwords / Pins
- Driver Licenses
- Dates of Birth
- Phone Numbers
- Personal Addresses

- Redact
- Encrypt
- Quarantine

Prevent Data Loss

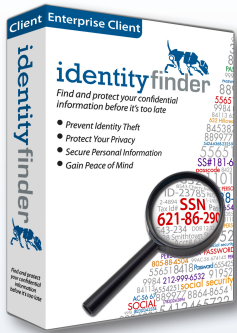

Over the past few years, over a quarter billion personal information records were exposed, mostly due to insecure data at rest. Sensitive data is everywhere and is often buried within long-since forgotten files and e-mails. Identity Finder automatically finds personal information and confidential data on your computers. The results are presented in an easy to understand view with quick access to sophisticated remediation features, allowing you to quickly clean your systems.

Protect and Comply

Your reputation can seriously suffer after a data breach, making it critical to protect personal information and reduce your risk. You have an obligation to your employees, customers, and partners. Nearly every state has already enacted privacy or data breach laws while significant federal and industry regulations (i.e., HIPAA, PCI, FERPA, GLBA, FISMA, Sarbanes-Oxley, Red Flag Rules, 201 CMR 17.00, etc.) also require compliance with privacy standards.

Complete Visibility

- **Files:** Microsoft Office Files (Excel, Word, PowerPoint) • Microsoft Access Database Files • Adobe Acrobat PDF Files (up to and including 9.x) • Compressed Files (zip, gzip, tar, rar, z,bzip) • Web Pages • Rich Text Format Files • Plain Text Files (ANSI, Unicode, Batch Files, Source Code Files, Cookies, Instant Messenger Logs) • Any other file format

Identity Finder Enterprise Client for Windows

Identity Finder helps organizations prevent data loss by finding and protecting personal information. The AnyFind™ engine automatically discovers sensitive information stored on desktops, servers, remote computers, databases, websites, and removable drives. Beyond identification, Identity Finder helps clean matches by offering remediation features including encryption, secure shredding, and redaction. Identity Finder is simple to use yet full of powerful features, perfect for both end users and IT administrators.

Requirements:

Windows Vista, Windows XP with SP1 or later, Windows Server 2003 or 2008, or Windows 2000 with SP3 or later. x86 and 64bit platforms supported. 50mb hard drive space and 512mb RAM.

Shred, Redact, Encrypt, or Quarantine unprotected PII. These features integrate with Windows Explorer for added simplicity.

Instantly preview any match with highlighted PII.

Search anywhere and easily analyze location properties to quickly determine risk.

Tailor your search to require multiple types of PII, including custom algorithms.

About Identity Finder
Identity Finder, LLC was founded in 2001 by innovative security experts. Its security and privacy technologies provide businesses and consumers the ability to prevent data leakage and identity theft. The company has quickly grown to become a leader in identity theft prevention by helping millions of consumers, small businesses, and enterprises in over fifty countries.
