Avoid being the next big data breach news story

To effectively manage risk, it is necessary to have enterprise-wide visibility into your organization's areas of exposure and an inventory of vulnerable PII. Further, a single initiative to find and protect insecure data is no longer enough. With Identity Finder Enterprise Console, you can analyze sensitive information across your entire organization and centrally manage policies on distributed Identity Finder clients to continually track compliance to your requirements. Enterprise Console arms managers with the intelligence they need to identify problem areas and prevent data leakage.

Prevent Data Loss

Over the past few years, over a quarter billion personal information records were exposed, mostly due to insecure data at rest. Sensitive data can be anywhere and most organizations do not even know where it resides. Your reputation and your employee's and customer's safety is at risk when you have a data breach, making it critical to protect sensitive information. Identity Finder Enterprise Console puts you in control and makes it easy to minimize the risk of data loss.

Reporting

- Customize reports with match data, log data, and status messages.
- Assign roles based access controls to employees.
- Dynamically drill down on specific data points in reports.
- Generate executive summaries from individual searches.
- View all endpoints and their last search time.
- Export match data and log data for additional analytics.
- Review the remediation actions performed by users.

Management

- Centrally manage configurations for deployed clients.
- Enforce policies on endpoints to customize usage.
- Perform ad-hoc or scheduled searches with a specific policy.
- Manage Identity Finder Client software updates.

Administration

- Control what client data is collected.
- Import and organize computers from Active Directory.
- Perform single sign-on authentication with Active Directory.
- Employ granular Roles Based Access Control.
- Configure clients and server to communicate over any port.
- Encrypt client data with 256 bit AES and RSA private key encryption.

Proactive Protection

Prevent data leakage by finding personal information & performing remedial actions.

Robust Reporting

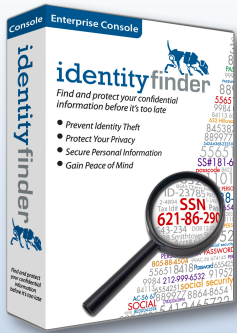

Monitor exposure to unprotected data across your entire enterprise.

Complete Compliance

Generate audit reports for internal and regulatory mandates.

Total Control

Manage deployments with centralized policy administration.

Identity Finder Enterprise Console

The Enterprise Console provides centralized reporting and remote administration. You can view results from all Identity Finder clients, generate management-level summary reports, and issue technical reports for users to clean their systems. You can publish policies to control search scheduling, initiate ad-hoc searches, and customize application features and the end user experience. Through the Enterprise Console, you can arm your managers to find problem areas and fix broken policies.

Requirements:

- Microsoft Windows Server 2003/2008
- Microsoft SQL Server 2005/2008 (Express, Standard, or Enterprise)
- Microsoft .NET Framework 3.5 SP1

Number of Endpoints Searched	64
Number of Endpoints with Match Data	64
Number of Searches	227
Number of Matches	218,765
Number of Searched Locations	721
Number of Shredded Matches	00

Social Security Number	30.33%
Personal Address	4.57%
Date of Birth	5.93%
Password	6.37%
PHI	7.44%
Bank Account Number	10.68%
Drivers License	11.12%
Credit Card Number	20.1%

Manually organize endpoints or import systems from Active Directory.

Quickly view scanned machines with the dashboard.

Customize data analysis with filtering and sorting.

Generate reports for end users, management, or internal audit.

Dynamically drill down into the data to determine the root cause of exposures.

Create policies to enforce custom configurations.
