

identityfinder mac edition

Love your Mac? So do identity thieves...

Macs have become increasingly common in today's workplace. As a result, they are just as likely as any Windows machine to contain insecure customer or employee data leaving your organization vulnerable to a data breach. Identity Finder intelligently and comprehensively searches Macs to help you find personal information and provides the tools to analyze that information and take action to protect it. To prevent data leakages, fix the problem at the source.

Prevent Data Loss

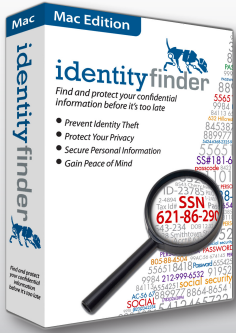

Over the past few years, over a quarter billion personal information records were exposed, mostly due to insecure data at rest. Sensitive data can be anywhere and is often buried within long-since forgotten files and archives. Identity Finder automatically finds personal information and confidential data on your computers – even when you and your employees don't know it exists. The results are presented in an easy to understand view with quick access to sophisticated remediation features, allowing you to quickly clean your systems.

Protect and Comply

Your reputation can seriously suffer after a data breach, making it critical to protect personal information and reduce your risk. You have an obligation to your employees, customers, and partners. Nearly every state has already enacted privacy or data breach laws while significant federal and industry regulations (i.e., HIPAA, PCI, FERPA, GLBA, FISMA, Sarbanes-Oxley, Red Flag Rules, 201 CMR 17.00, etc.) also require compliance with privacy standards.

Complete Visibility

- Microsoft Office Files (Excel, Word, PowerPoint)
- Adobe Acrobat PDF Files
- Compressed Files (zip, dmg)
- Web Pages
- Rich Text Format Files
- Plain Text Files (ANSI, Unicode, Batch Files, Source Code Files, Cookies, Instant Messenger Logs)
- Any other file format

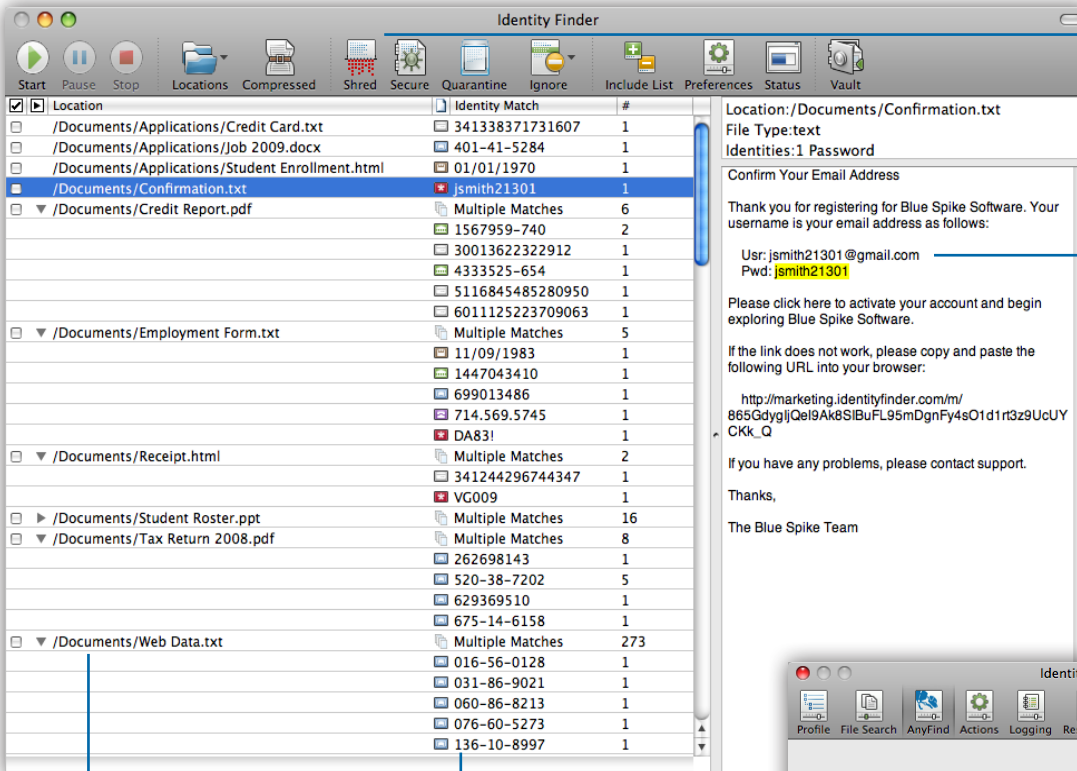

Identity Finder Mac Edition

Identity Finder helps organizations prevent data loss by finding and protecting personal information. The AnyFind™ engine automatically discovers sensitive information stored on Mac desktops. Beyond identification, Identity Finder helps clean matches by offering remediation features including shredding, securing, and quarantining. Identity Finder is simple to use yet full of powerful features, perfect for both end users and IT administrators.

Requirements:

Mac OS X versions 10.4 and higher on Intel based hardware platforms.

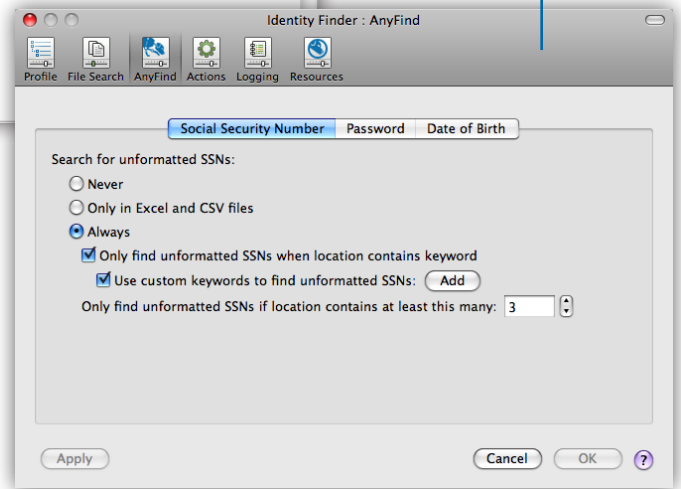

When sensitive data is found, you can quarantine it to a secure location, encrypt it, or permanently delete it with the shred feature.

See how easy it is to analyze your results and view exactly where, and in what context, potentially dangerous information is being stored.

Powerful and flexible search settings allow you to customize your experience.

Identity Finder searches through files to locate and secure sensitive data.

AnyFind™ technology automatically locates personal information such as SSNs, Credit Cards, Bank Account numbers, Dates of Birth, Phone numbers, and Passwords.

About Identity Finder

Identity Finder, LLC was founded in 2001 by innovative security experts. Its security and privacy technologies provide businesses and consumers the ability to prevent data leakage and identity theft. The company has quickly grown to become a leader in identity theft prevention by helping millions of consumers, small businesses, and enterprises in over fifty countries.
